

EAGLE EYE

Color Night Vision Camera

Eagle Eye cameras makes it possible to view and record in colors during night – even in the near total darkness of scenes invisible to the human eye.

The new Eagle Eye CAN-2000 MKII is a unique two-in-one camera, which can also be used as an IR-camera. One unit covers all conditions – night and day, in all lighting conditions, in color or IR, in video and still images.

PHOTOGRAPHY

Full color night vision opens up a new world of creative and documentary possibilities to the advanced photographers. The Eagle Eye CAN-2000 MKII camera can operate in color mode when there is even an invisible level of ambient light. In the IR mode it can operate in a no light environment using IR illumination.

COLOR NIGHT VISION & IR

Covers all surveillance applications: night and day, in all lighting conditions, in color or IR, in video and still images, short distance or kilometres away.

DUAL FUNCTION

Captures video and still images with simple two button operation.
